

KSU GIS/MAPS/CARTOGRAPHY

Bryson Yates and Cannon McDaniel

Hi, we Bryson Yates and Cannon McDaniel created a map of our school South Warren for the KSU GIS/MAPS/CARTOGRAPHY category. We have made a map of our school to the best of our abilities. We created a first and second floor of our school. Our purpose for creating the map of are school is. We wanted to see how well we could make are school. It started out I did it for fun, but then we wanted to do the KSU GIS/MAPS/CARTOGRAPHY. So basically the reason for creating the map was to have fun.

The process

First we looked for websites to make a virtual map for a 2d and 3d view of the process. After are classmate Hunter Hendrix found a website called www.floorplanner.com we had started to design the first and second floors of our school South Warren.

Second we had started to build the hallways with the classrooms in it. We tried are best to make sure each of the classrooms where the exact measurements. We made the rooms for the first and second floors.

Third we started to label all of the rooms by there room numbers. We did it by numbers cause some of the rooms don't have a teacher so it was easier to name them by there numbers.

Fourth we started to make the gym,office,and lockers rooms. The office was probably the hardest part cause there was a lot of rooms for one single spot. Then we drew what the site calls the surface which is where you outline a spot you want to and then you can make a color out of it.

Fifth we finished and screenshot our floors and put them in a Keynote and labeled them Ground Floor, and Second Floor. Then we put it onto a flash drive and turn them in.
