

STLP FALL SHOWCASE

Students Technology Leadership Program

December 6, 2012

WELCOME TO STLP FALL SHOWCASE

By: McKayla Marcrum

The amazing turn out for Fall Showcase. There was also another gym taken up entirely of elementary school student's projects!

This year's STLP Fall Showcase was very successful. There were hundreds of student's who participated in this year's Fall Showcase and they all were outstanding! There were things from bullying, to recycling to even bracelet making. The students and teachers there came to school gathered everything they'd need for their showcases and rode on down to WKU. The students would then set up their projects and wait for their time for the judges to come around and go over and score their showcase. Other students, such as myself, got the chance to be apart of this day and really get into Fall Showcase. There were gazette reporters there interviewing and getting to see and be involved in some students projects. There was such a big variety as to what was out there on the floor at WKU on the 6th. It was a fun time and everybody enjoyed every bit of it! Good luck and congratulations to all the students that advance in this year's showcase!

STLP FALL SHOWCASE

PARTICIPANTS

Bowling Green Junior High School

Bowling Green Junior High School students, Rashad Darden, Kameron Riehn, Madisyn Peeples and Caroline Atkerson, are all about great opportunities the world has to offer. They presented their project and talked about how to prepare students for life and also explore future careers. They shared a lot about how to actually be ready for future careers and job offers. They did an excellent job presenting and I wish them the best of luck!

Russellville Junior High, Kyran and Jaron, are all about recycling! They showed how students could get more involved in recycling and showed the importance of recycling and also how small every day things can turn into a great opportunity. They had created a robot made entirely out of recycled materials. From the body to eyes to even the head, all recycled. The motor was the only thing not made out of recycled materials. They even demonstrated what the robot can do, like how it can roam and move it's arms and even the eyes flicker on and off as if it's blinking! They both did an outstanding job of showing off the importance of recycling and what you can create and accomplish when you do. Great job boys!

STLP FALL SHOWCASE

PARTICIPANTS

Larue County Middle School

Larue County Middle School's, Seth, Skyler, Symone and Bailey, are "Staying Connecting" to their school by being involved in STLP. Their project was all about staying connected to your school and being more involved in what your school has to offer. Like sports such as basketball or softball or clubs like art or math club or even STLP! They all did an excellent job of showing how they are working to get students involved.

Good luck Larue County Middle!

Todd County Middle School's students, Ali Kerns, Hannah Petric and Leah Whiles, thought a little outside the box on their project. They shared their thoughts on the ordinary yearbook. They told how the old-fashioned yearbook didn't have anything fantastic or interesting about it, just pages you can flip through. They showed how awesome it would be to be able to have a virtual yearbook! I mean come on how cool would that be! They said how with a yearbook you can't express your feelings through it. But with the virtual one you can, you can interview people on their thoughts about the year and it can be more personal and more kids would be willing to buy one!

They said how they'd plan to sell these and they said they would put it on a DVD to play whenever you want! It was really interesting to hear about their ideas and plans for the virtual yearbook. Good luck ladies!
